## **CONNECTING COMMUNITIES TO RELIABLE POWER**

*Planning, building and maintaining high-voltage  
electric transmission lines and substations for  
Georgia's electric membership corporations*

## FINDING THE BEST LOCATION FOR NEW INFRASTRUCTURE

Building a new transmission line or substation means becoming a permanent part of your community. That's why we take our responsibility of being a good neighbor seriously, and why you'll hear from us directly about each new project being proposed for your community. We not only spend time behind the desk analyzing data; we also put boots on the ground to study environmental, historical and cultural conditions. We gather input from the community to make a thoughtful decision about new line placement – a decision that addresses energy needs while minimizing overall impact.

Minimize effects to  
natural resources

Reduce impact  
on communities by  
leveraging existing  
land use

Evaluate  
engineering  
constraints

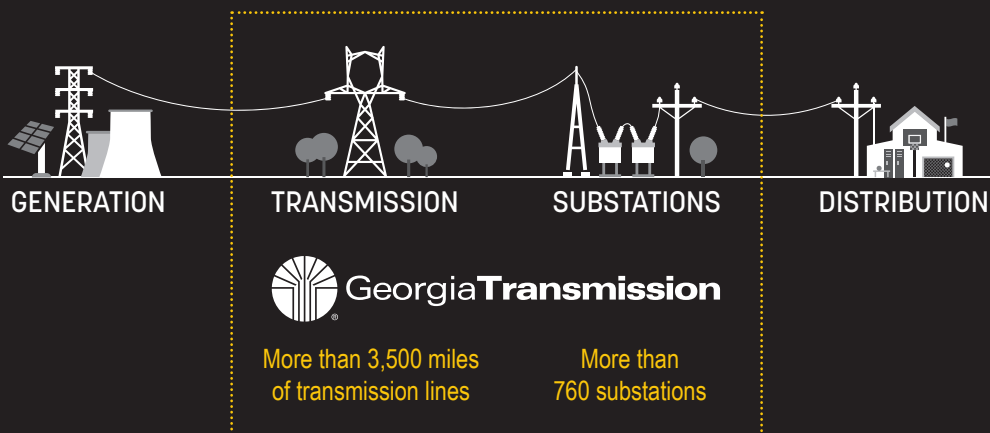

Consider existing  
infrastructure  
for co-location

## DELIVERING ELECTRIC POWER

Georgia Transmission is a not-for-profit transmission-only electric cooperative owned by 38 of Georgia's Electric Membership Corporations (EMCs). We plan, build and maintain the high-voltage electrical infrastructure that delivers power to Georgia's EMCs, providing electricity to more than 4.4 million Georgians. The resiliency of Georgia's energy grid is achieved through the dedication and cooperation of many people, including leaders like you. Your community expects safe, reliable, cost-effective power – and we're here to work with you to continue delivering on those expectations.

## SECURING THE POWER GRID

The risks to our power grid continue to evolve. That's why at Georgia Transmission we collaborate with numerous industry partners, state and federal regulators, and your local EMC to anticipate and account for potential threats to reliability. From assessing the effects of Mother Nature to predicting those posed by sophisticated cyberattacks, we are vigilant in defending the strength and integrity of our transmission network. You can be confident we'll do everything we can to keep the power on for your community.

Prepare a  
multilayered strategy  
for prevention and  
swift response

Maintain a dynamic  
grid to reroute  
electricity quickly when  
outages occur

Participate in  
real-world threat  
simulations

Partner with  
cybersecurity experts  
and government  
agencies

## PLANNING FOR A BRIGHT FUTURE

Planning for the future is standard procedure at Georgia Transmission. Working with your local EMC, our strategy includes forecasting population growth, projecting usage trends and accounting for evolving technology. It also means ensuring a dynamic grid that can incorporate more renewable energy sources and allow for strong business growth in your community. Renewable energy serves as an economic development tool helping to attract new businesses and helping existing businesses achieve sustainability goals.

Collaborate with Green Power EMC, the largest operational green power program in the Southeast

Provide transmission for a diverse energy mix to help make our power grid more reliable and cost effective

Create opportunity for local businesses to expand by providing reliable electric infrastructure

Increase electric capacity to attract new businesses and jobs to your community

# ANSWERING YOUR QUESTIONS

We hope you've gained a better understanding about Georgia Transmission, and how we work with you and your local EMC to safely deliver reliable, cost-effective electricity to your community.

You'll hear from us at the beginning of each new project being proposed for your community; however, we know you may have questions now or want to learn more. Our website provides answers to commonly asked questions from how we work with residents and property owners to how we maintain our rights of way. And, we always welcome the opportunity to visit your community to meet with you.
